

Where2Go Website User Guide

A beginner-friendly walkthrough for customers, partners, and admins

Purpose

This document explains how to use Where2Go from the first visit through discovery, reservations, rewards, partner listing management, and admin approval.

Prepared for the Where2Go website - May 17, 2026

1. What Where2Go Is

Where2Go is a Cairo discovery website. It helps people find places to go, save places to their profile, make reservations at approved partner businesses, leave reviews, and use QR check-ins and rewards.

In one sentence

Where2Go helps users decide where to go, while giving partner businesses a place to publish approved listings, manage bookings, and participate in rewards.

The three main sides of the website

Side	Who uses it	Main purpose
Customer / visitor	People looking for places around Cairo	Browse, search, save places, reserve, review, and claim rewards.
Partner	Business owners and managers	Create listings, add locations, manage offers, and handle reservations.
Admin	Approved internal users	Approve businesses, monitor activity, and configure reward rules.

Quick start for a new customer

1. Open Home.php to start browsing the discovery homepage.
2. Use category cards or the search page to narrow places by Restaurants, Cafes, Activities, Entertainment, Nightlife, or Heritage.
3. Open a place page to view photos, details, reviews, menus, offers, locations, and reservation options.
4. Create an account or log in if you want to save places, reserve, review, or collect rewards.
5. Use the profile page to see saved places and reservations, then open suggestions for more ideas based on saved places.
6. At partner locations, scan the QR code to claim points, level progress, mystery boxes, and vouchers.

2. Customer Side

The customer side is for discovering places and managing personal activity. Visitors can browse without logging in, but customer accounts unlock saving, reservations, reviews, and rewards.

Customer-facing pages

Page	What it is for	What users do there
Home.php	Main discovery homepage.	Browse original Where2Go picks, use category shortcuts, try the chooser, see saved count, and open place cards.
search.php	Search and catalog filtering.	Search by text, filter by catalog, and save matching results to the profile.
place.php	Detail page for one place.	View media, details, menus, offers, locations, reviews, reservations, and save controls.
register.php	Customer account creation.	Enter account details so the user can save, reserve, review, and earn rewards.
login.php	Customer sign-in.	Sign in with email and password, optionally returning to the page the user came from.
profile.php	Customer account dashboard.	Manage profile photo, saved places, reservations, and shortcuts to suggestions.
suggestions.php	Personal recommendations.	See new places based on the places already saved in the profile.
checkin.php	QR check-in and rewards.	Claim scan rewards, view points, levels, mystery boxes, and active vouchers.
about.php	Project information.	Read the mission, story, contact details, and the simple purpose of Where2Go.
index.php	Landing/showcase page.	See the branded public-facing Where2Go presentation and intro experience.

Catalog and category

Catalog is the broad section. Category is the more specific type inside that section. For example, catalog nightlife can contain categories such as Rooftop or Lounge.

Catalog options and example categories

Catalog	Label shown to users	Example category values
restaurant	Restaurants	Restaurant
cafe	Cafes	Cafe, Late-night Cafe, Relaxed Hangout
activity	Activities	Activity, Outdoor, Fun Spot
entertainment	Entertainment	Entertainment Hub, Mall
nightlife	Nightlife	Rooftop, Lounge
heritage	Heritage & Culture	Museum, Heritage Site, Market, Viewpoint
other	Other	Other

How search works

- Typing in the search bar looks for place names, categories, descriptions, and related search text.
- Choosing a catalog limits the results to places that belong to that broad catalog.
- The catalog filter is meant to prevent unrelated places from showing when a user selects a specific section.
- The quick pills on the search page link directly to filtered catalog results.

3. Place Pages, Reservations, and Reviews

The place detail page is where browsing becomes action. It works for both original Where2Go places and approved partner business listings.

What the place detail page contains

Area on place.php	What it shows	Important behavior
Hero section	Place name, short summary, save button, and website link when available.	Anonymous users are sent to login if they try to save.
Gallery	Main image or video plus thumbnails.	Multiple media items can rotate automatically and can be clicked manually.
What to expect	Description of the original place or partner business.	This is the main explanation of why the place is useful.
Details panel	Catalog/category, rating, address, phone, website, and listing status.	Partner listings show approved/pending/private preview state depending on access.
Reservation panel	Location, guest count, availability calendar, and time slots.	Only appears when the partner location allows reservations. Date changes refresh the panel without reloading the full page.
Reviews	Public customer reviews and review form.	Original places can be reviewed by logged-in users. Partner reviews unlock after a completed reservation time.
Offers and menus	Active offers and menu links from partner listings.	Partners control these from the business form.
Locations	All partner branches, hours, address, phone, and reservation status.	Each location can have different hours and reservation settings.

Reservation flow

7. The customer opens an approved partner business.
8. The customer chooses a reservable location.
9. The customer sets the guest count.
10. The customer chooses an available day from the calendar.
11. The customer picks an available time slot.
12. The reservation is submitted as pending.
13. The partner approves, rejects, cancels, or completes the booking from the dashboard.

Important reservation note

A place can be visible on Where2Go but still be walk-in only. Reservations only appear when a partner enables reservations for that specific location.

“”””This is what we will be implementing in the future””””

4. Customer Profile, Suggestions, and Rewards

Profile

- Shows the customer profile photo and account activity.
- Lists saved places and upcoming or past reservations.
- Provides a shortcut to suggestions.
- Profile photos are stored in assets/images/uploads after upload; the folder is created automatically when needed.

Suggestions

- Uses saved places as the signal for recommending new ideas.
- Avoids recommending places already in the saved list.
- Gives users a quick path back into discovery when they are not sure what to search for.

Rewards and QR check-ins

14. A customer visits a partner location.
15. The customer scans the location QR code.
16. The check-in page validates the token and customer login.
17. The customer claims points for the scan.
18. Points increase the customer level and streak progress.
19. At configured level milestones, the customer unlocks a mystery reward box.
20. A mystery box spins into a voucher such as a percentage discount.

Reward terms

Reward item	Meaning
Points	Earned from eligible QR scans and configured reward actions.
Level	Progress measure based on total points.
Streak	Tracks repeated customer reward activity over time.
Mystery box	Unlocked at configured level intervals and used to spin for a voucher.
Voucher	A reward code connected to a business/location with an expiry date.

5. Partner Side

Partners are business owners or managers. Partner accounts are separate from customer accounts and are used to create and manage business listings.

Partner portal pages

Partner page	What it is for	What the partner does there
partner-register.php	Create a partner account.	Enter owner details and create the login used for the partner portal.
partner-login.php	Partner sign-in.	Open the partner dashboard with business-owner credentials.
partner-dashboard.php	Partner control center.	See business metrics, listing statuses, views, reservations, offers, and upcoming bookings.
partner-business-form.php	Add or edit a business.	Manage identity, locations, reservation settings, hours, photos, menus, offers, and rules.
partner-logout.php	Partner sign-out.	End the partner session.

Partner listing lifecycle

21. The business owner creates a partner account.
22. The partner logs in and opens the dashboard.
23. The partner adds a business listing with details customers need before visiting.
24. The business is saved as pending approval.
25. An admin reviews the listing.
26. If approved, the listing becomes public in discovery/search.
27. If rejected, the partner sees the admin note and can edit the listing.
28. The partner continues managing offers, hours, locations, and reservations from the dashboard.

What partners can manage in the business form

Business form section	Fields or controls	Why it matters
Business identity	Name, website, logo URL, type, custom type, description, rules.	Creates the public identity and explains the business to customers.
Locations	Location name, address, phone, capacity, reservation toggle.	Supports one or more branches with different booking settings.
Working hours	Open/close time for each day, closed toggle, apply-to-all helper.	Controls availability display and reservation slot generation.

Business form section	Fields or controls	Why it matters
Photos	Up to 6 image URLs.	Builds the public gallery. The first image becomes the main photo.
Menus	Menu title and menu URL.	Gives customers direct access to food/service menus.
Offers	Title, description, discount, dates, active toggle.	Shows live promotions on the public business detail page.

Partner dashboard metrics and actions

- Businesses: number of listings connected to the partner account.
- Views: public detail-page visits on approved businesses.
- Reservations: total reservation requests across partner locations.
- Upcoming: pending or confirmed bookings from today forward.
- Live offers: currently active offers on approved businesses.
- Reservation actions: approve, reject, cancel, or complete bookings.

Partner approval rule

A partner can prepare and preview a listing, but it should not become public to customers until an admin approves it.

6. Admin Side

Admins are customer accounts whose emails are listed in the admin configuration. Admin access is used to review partner listings, monitor activity, and control rewards.

Admin pages

Admin page	What it is for	Main controls
admin/dashboard.php	Site-wide overview.	Tracks active views, customers, partners, businesses, reservations, reviews, pending approvals, and place performance.
admin/business-approvals.php	Business review workspace.	Approve valid listings, reject listings with notes, and inspect approved/rejected history.
admin/reward-config.php	Reward program settings.	Adjust scan points, cooldowns, daily limits, mystery box timing, voucher rules, and wheel probabilities.

Admin approval flow

29. A partner submits a business listing.
30. The listing appears as pending in admin/business-approvals.php.
31. The admin opens the preview and checks the business details.
32. The admin approves the listing if it is ready.
33. The admin rejects the listing with a note if the partner needs to fix something.
34. Approved and rejected businesses remain visible in review history for later inspection.

Reward configuration

- First scan points decide how much a customer earns the first time they scan a location.
- Repeat scan points and same-day repeat rules control repeat behavior.
- Daily limits and cooldowns reduce abuse.
- Mystery box timing controls how often reward boxes unlock.
- Wheel probabilities control the chance of each voucher value.
- Voucher expiry and safety rules protect the reward program from being too generous or indefinite.

7. Typical User Journeys

Common website journeys

Journey	Steps
Find a place quickly	Open Home.php -> choose a catalog card or search -> open a place -> save it or view details.
Make a reservation	Open an approved partner business -> choose location and guests -> pick available date -> pick time -> submit booking -> wait for partner approval.

Journey	Steps
Use suggestions	Log in -> save places -> open profile or suggestions -> choose a new recommendation.
Claim a reward	Visit partner location -> scan QR code -> log in if needed -> claim points -> spin a mystery box when unlocked.
Submit a partner listing	Partner registers -> logs in -> adds business details -> submits -> waits for admin review -> manages public listing after approval.
Approve a business	Admin logs in -> opens approvals -> reviews pending listing -> approves or rejects with a note.

8. Glossary

Key website terms

Term	Meaning
Catalog	Broad discovery section such as restaurant, cafe, activity, entertainment, nightlife, heritage, or other.
Category	More specific type inside a catalog, such as Rooftop, Museum, Late-night Cafe, or Mall.
Original pick	A built-in Where2Go place that exists before partner businesses are added.
Partner business	A business listing created by a partner account and reviewed by admin.
Location	A branch or address under a partner business. Each location has its own hours and reservation settings.
Reservation	A customer booking request for a location, date, time, and guest count.
QR check-in	A reward action that starts when a customer scans a location QR code.
Mystery box	A reward box unlocked through level progress and spun into a voucher.
Voucher	A reward code connected to a business/location with an expiry date.
Admin approval	The review step that decides whether a partner listing becomes public.

Final summary

Where2Go helps customers discover and save places, reserve approved partner locations, review experiences, and earn rewards. Partners manage their own listings and reservations through the partner portal. Admins protect quality by approving businesses and controlling reward rules.
